

An Introduction to Geospatial Analysis for Health Disparities Research

Justin Stoler, PhD, MPH, CPH

Department of Geography

Department of Public Health Sciences

Abess Center for Ecosystem Science & Policy

The Health Geographics Lab: miami.edu/healthgeo

Agenda

Introduction to Geospatial Analysis (me)

Audience Group Activity (you)

Group Discussion (we)

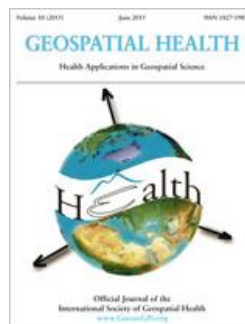

Motivation

The number of tools and data sources for geographic analysis has been exploding.

Most disciplines have re-discovered spatial thinking and spatial analysis (the natural sciences are furthest along).

Spatial analysis in public health has been mainstream for a while.

On Airs, Waters, and Places

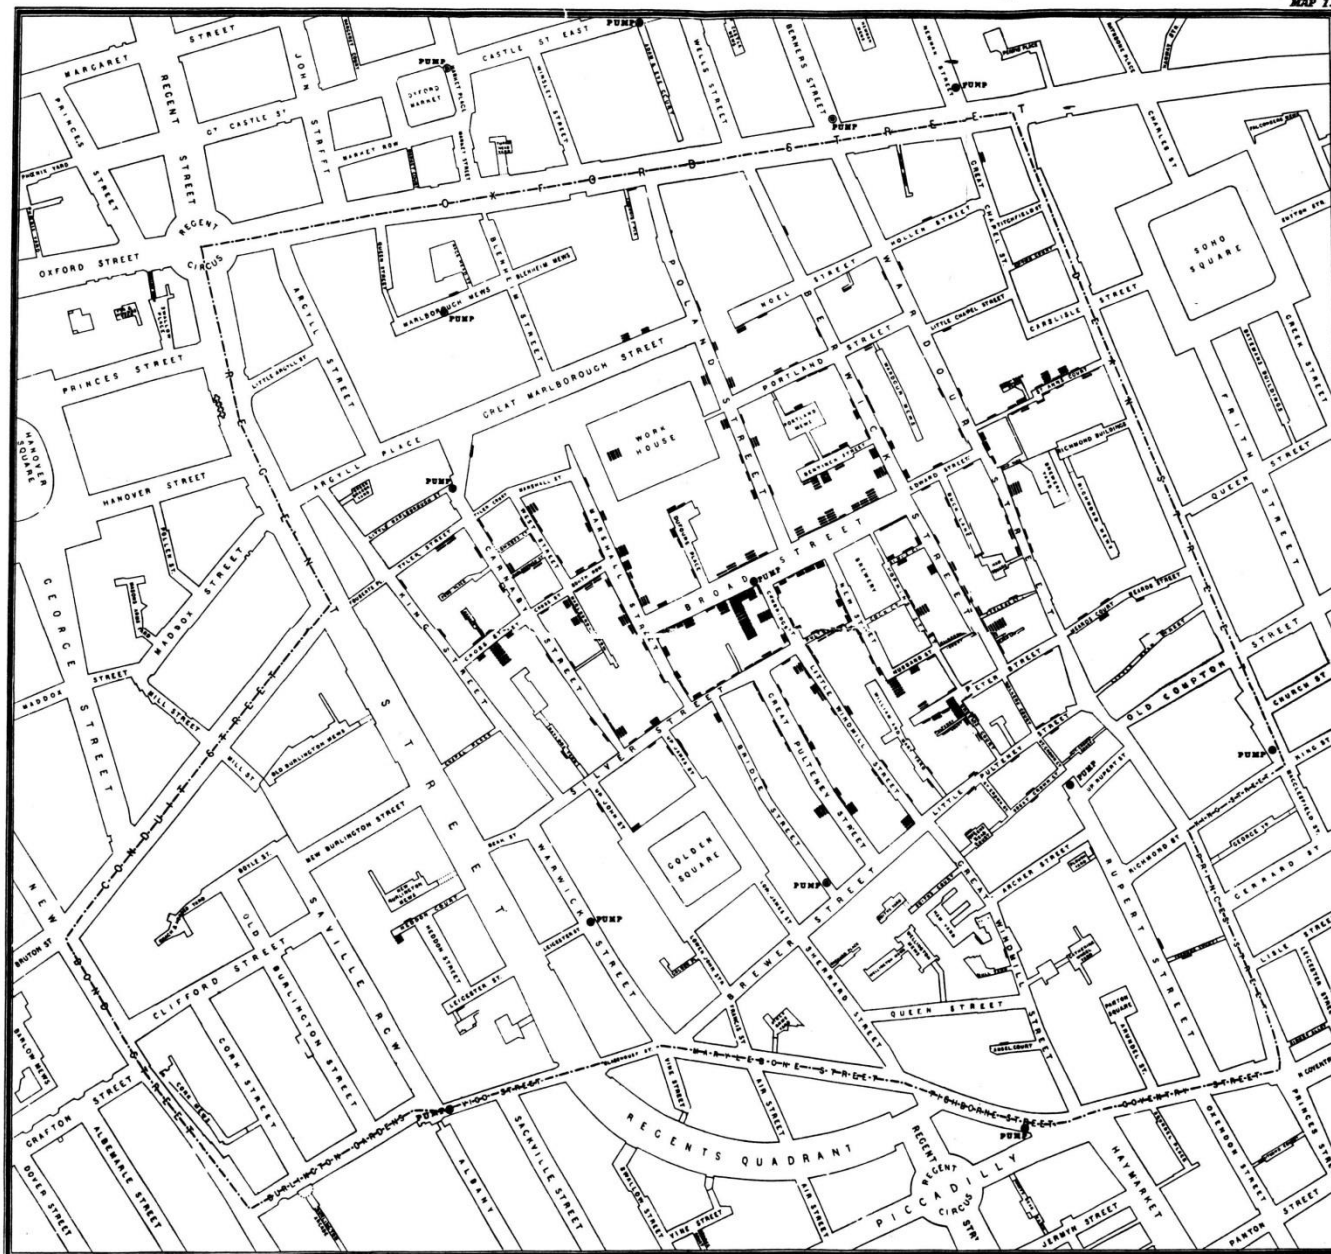

Whoever wishes to investigate medicine properly, should proceed thus: ...consider the seasons of the year, and what effects each of them produces... Then the winds, ...such as are peculiar to each locality. We must also consider the qualities of the waters, for as they differ from one another in taste and weight... In the same manner, when one comes into a city, he ought to consider its situation, how it lies as to the winds and the rising of the sun... the waters which the inhabitants use, whether they be marshy and soft, or hard and running from elevated and rocky situations, and deficient in water, or wooded and well watered, and whether it lies in a hollow, confined situation, or is elevated and cold; and the mode in which the inhabitants live, and what are their pursuits...

From these things he must proceed to investigate everything else.

-Hippocrates (c. 400 BC)

C. F. Gifford, Lith. Southampton & London

SCALE 50 INCHES TO A MILE.

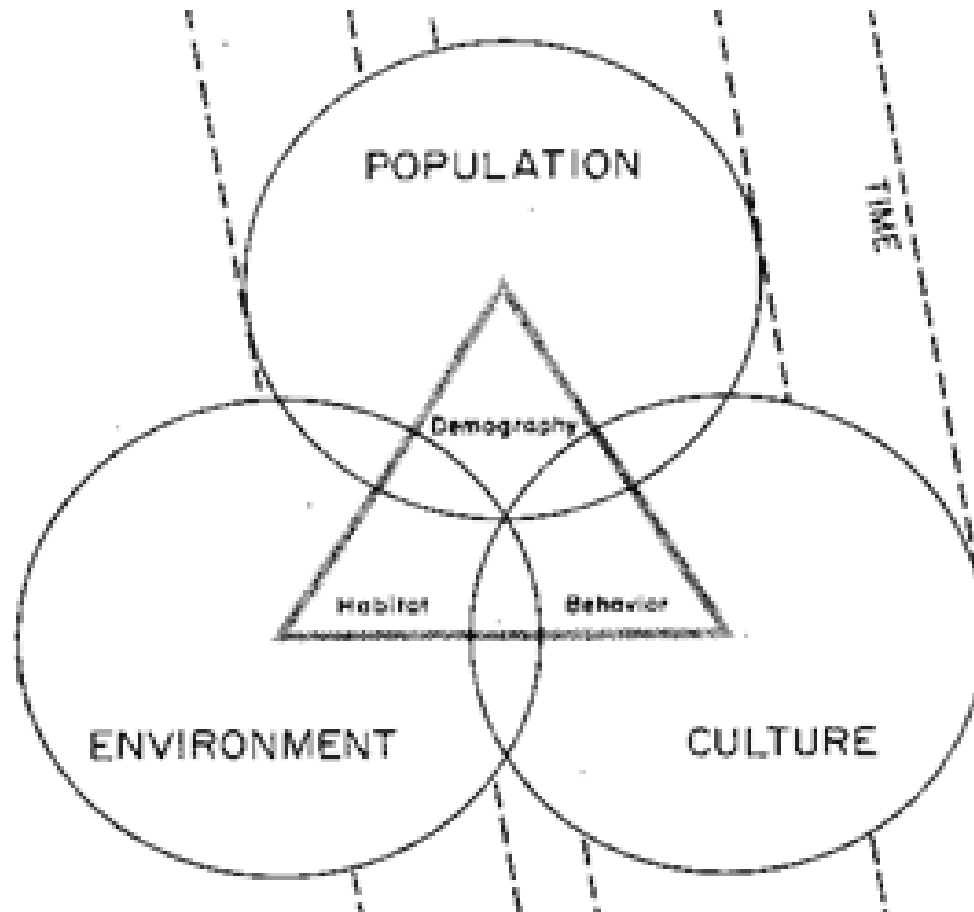

Modern Medical Geography

- The emergence of a systematic interest in medical geography can be dated from the first report of the commission on Medical Geography (ecology) of Health and Disease to the International Geographical Union in 1952
 - geographic pathology, medical ecology, medical topography, geographical epidemiology, geomedicine
- More recently: health geography, spatial epidemiology, etc.

Triangle of Human Ecology

Melinda Meade: Medical Geography and Human Ecology, 1977

Fast Forward to Today

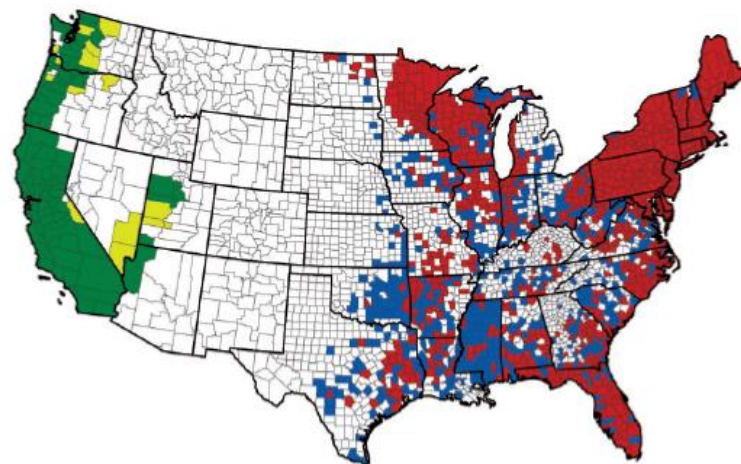

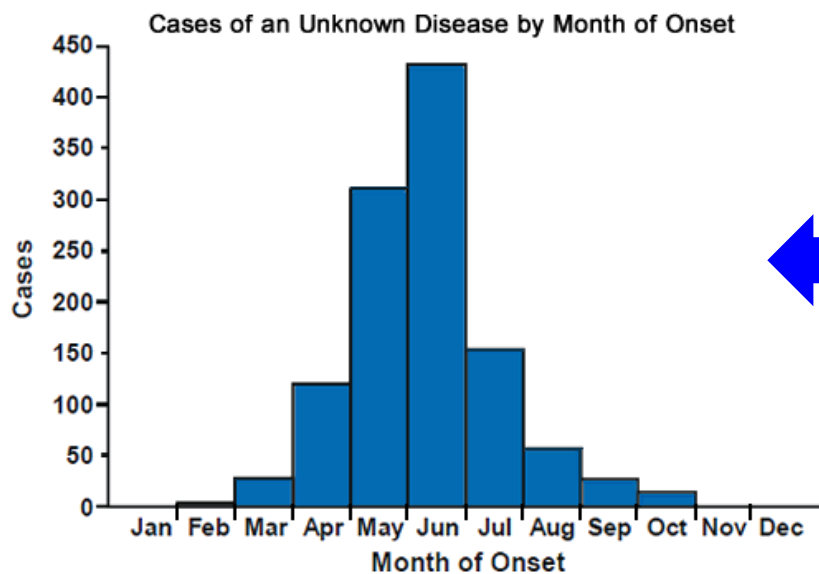

Explosive growth in Health Geography due to:

- emerging and reemerging infectious diseases in a globalizing world
- increase in degenerative diseases due to “Westernization” and population aging
- maturity of GIS, leading to increased scientific analysis of spatial patterns of disease and health risks

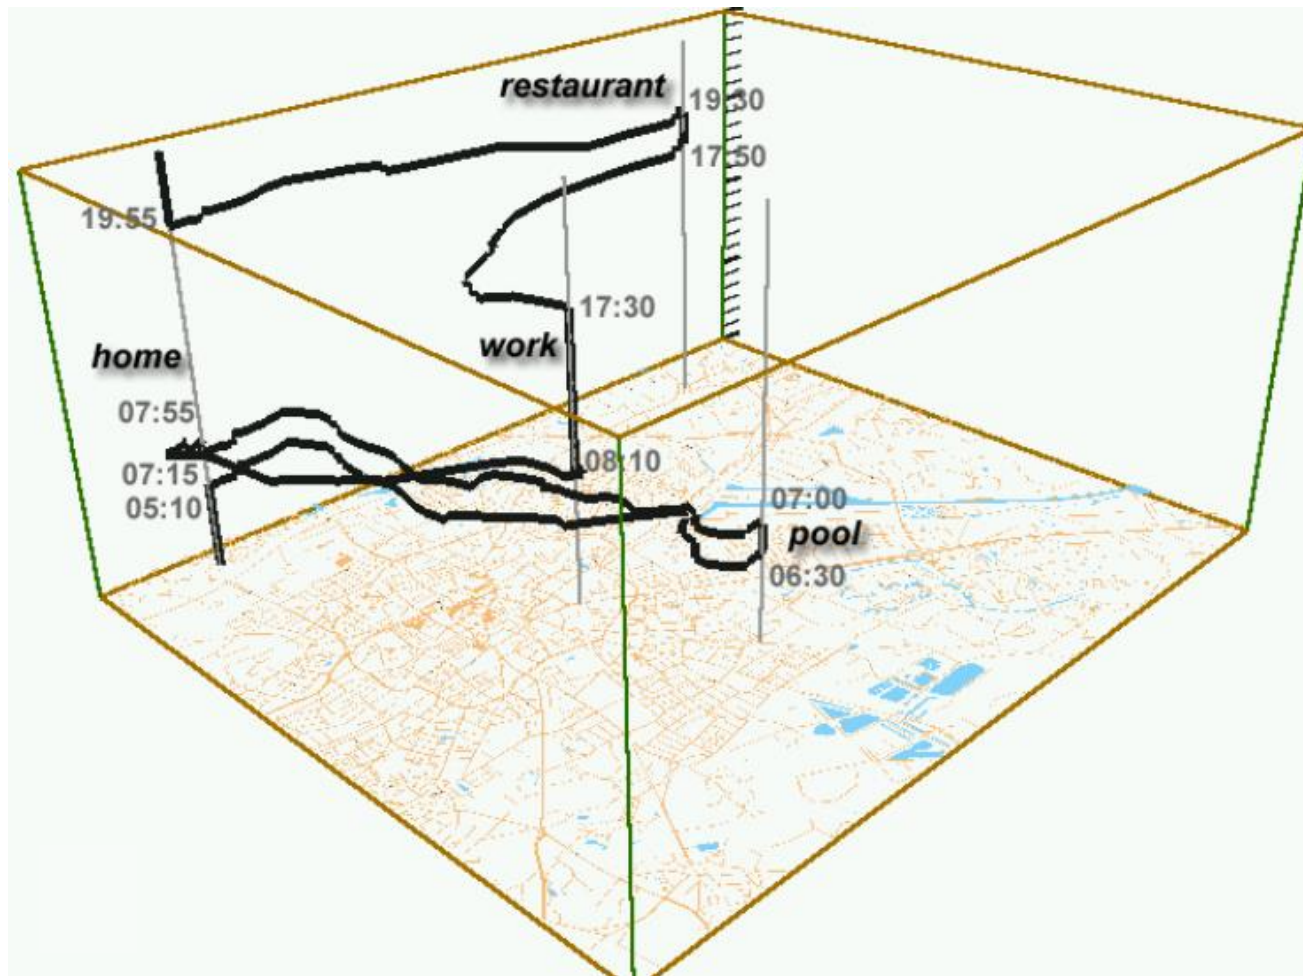

Epidemiology Defined

“The study of the determinants, **distribution**, and control of disease and other health factors.”

The Holy Grail: The Space-Time Cube

Interest in a Spatial Perspective

Driven by:

- a) the ready availability of very different kinds of geo-referenced data
- b) the tools to visualize and analyze them:
 - geographic information systems (GIS)
 - spatial analysis
 - spatial statistics

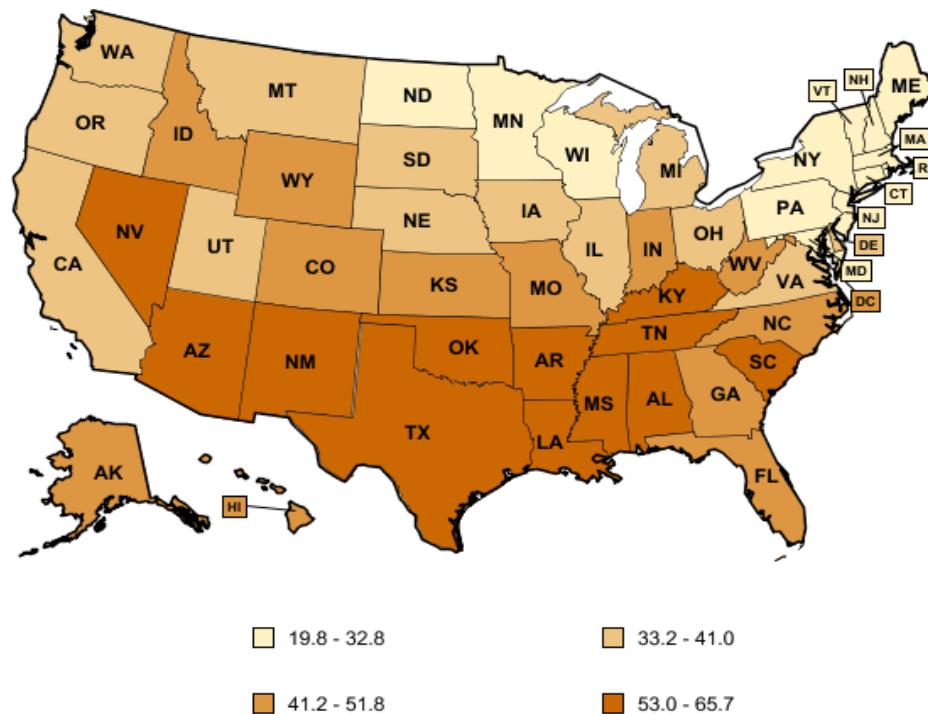

Geographic Information Science

	Teen Birth Rate per 1,000
United States	41.5
Alabama	53.0
Alaska	46.8
Arizona	56.2
Arkansas	61.8
California	38.4
Colorado	42.5
Connecticut	22.9
Delaware	40.4
District of Columbia	50.9
Florida	42.8
Georgia	51.8
Hawaii	42.1
Idaho	41.2
Illinois	38.1
Indiana	43.7
Iowa	33.9
Kansas	45.6
Kentucky	55.6
Louisiana	54.1

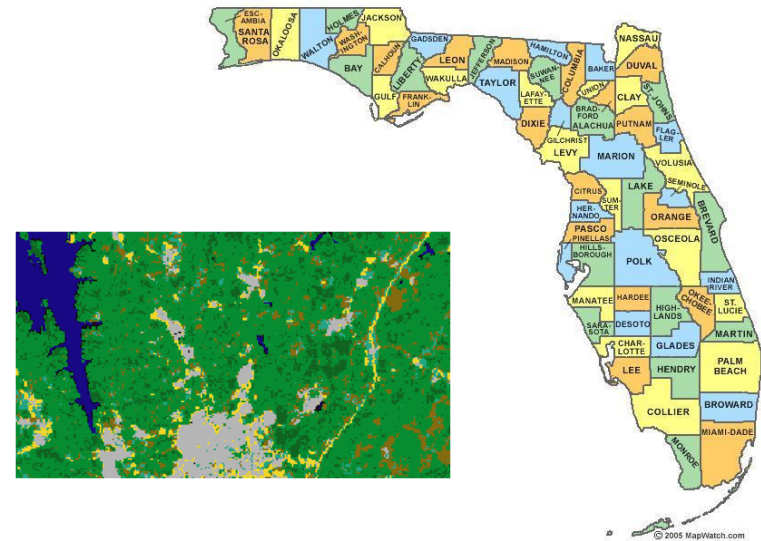

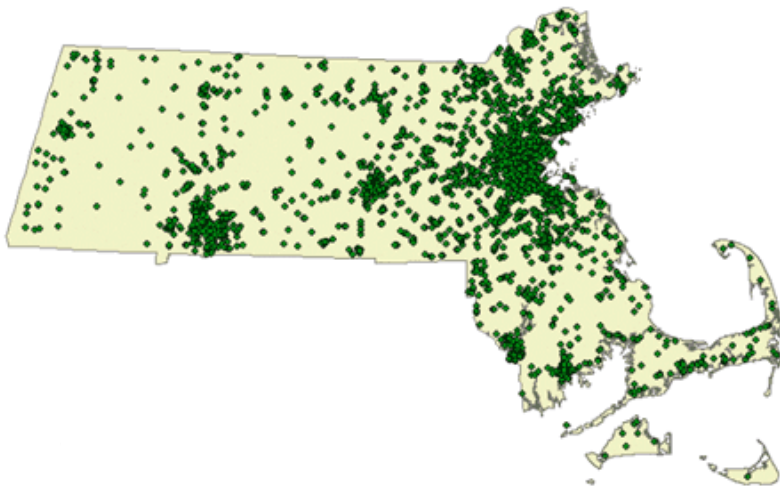

← summary statistic

What is Spatial Data?

Simply any data with explicit or inherent location

- x-y coordinates
- linked to some areal region

What is Spatial Data?

Geographic (spatial) data have unique features

- location = ID variable
- absolute and relative location
- scale/aggregation
- spatial embeddedness (networks, hierarchies)
- spatial autocorrelation

Ignoring these unique features limits analytical potential and can also introduce problems.

Why Spatial Data?

The ability to analyze, over space and time:

locations

quantities

densities

changes

connections

what's inside

what's nearby

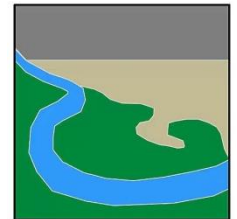

Representations of Geographic Data

Two methods of representing geographic data in digital format:

Vector (features):

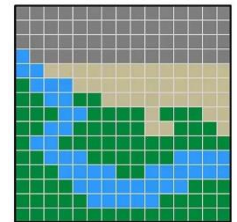

- point: to record location in a 2-dimensional space
- lines: between two points (directions and length)
- polygons: closed vectors (area, centroids, and perimeter)

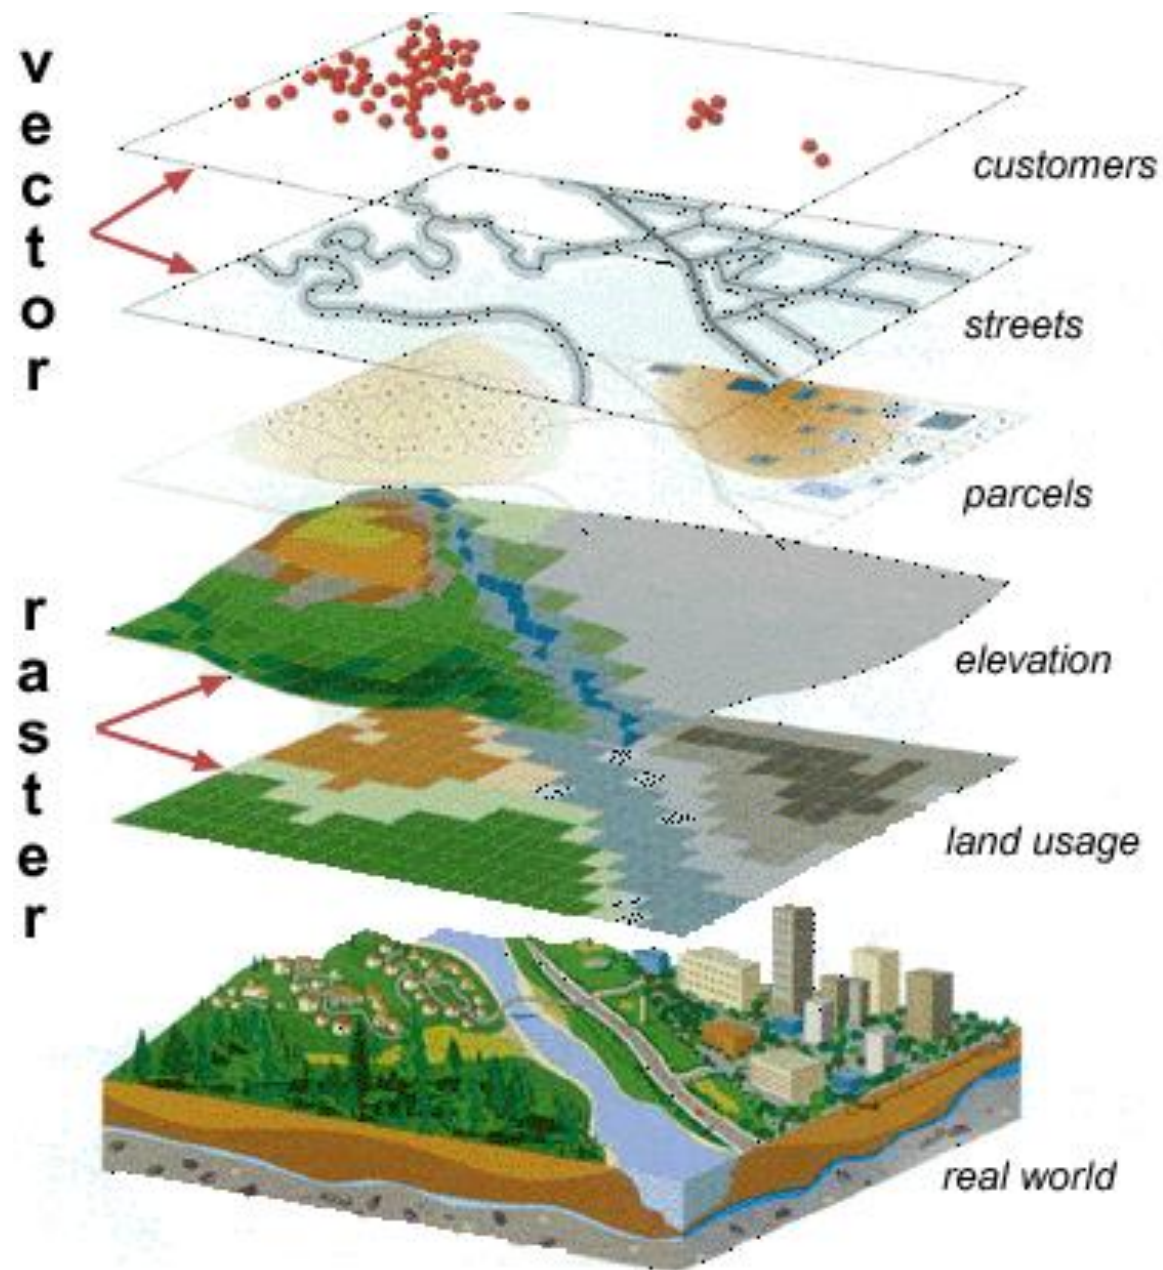

VECTOR

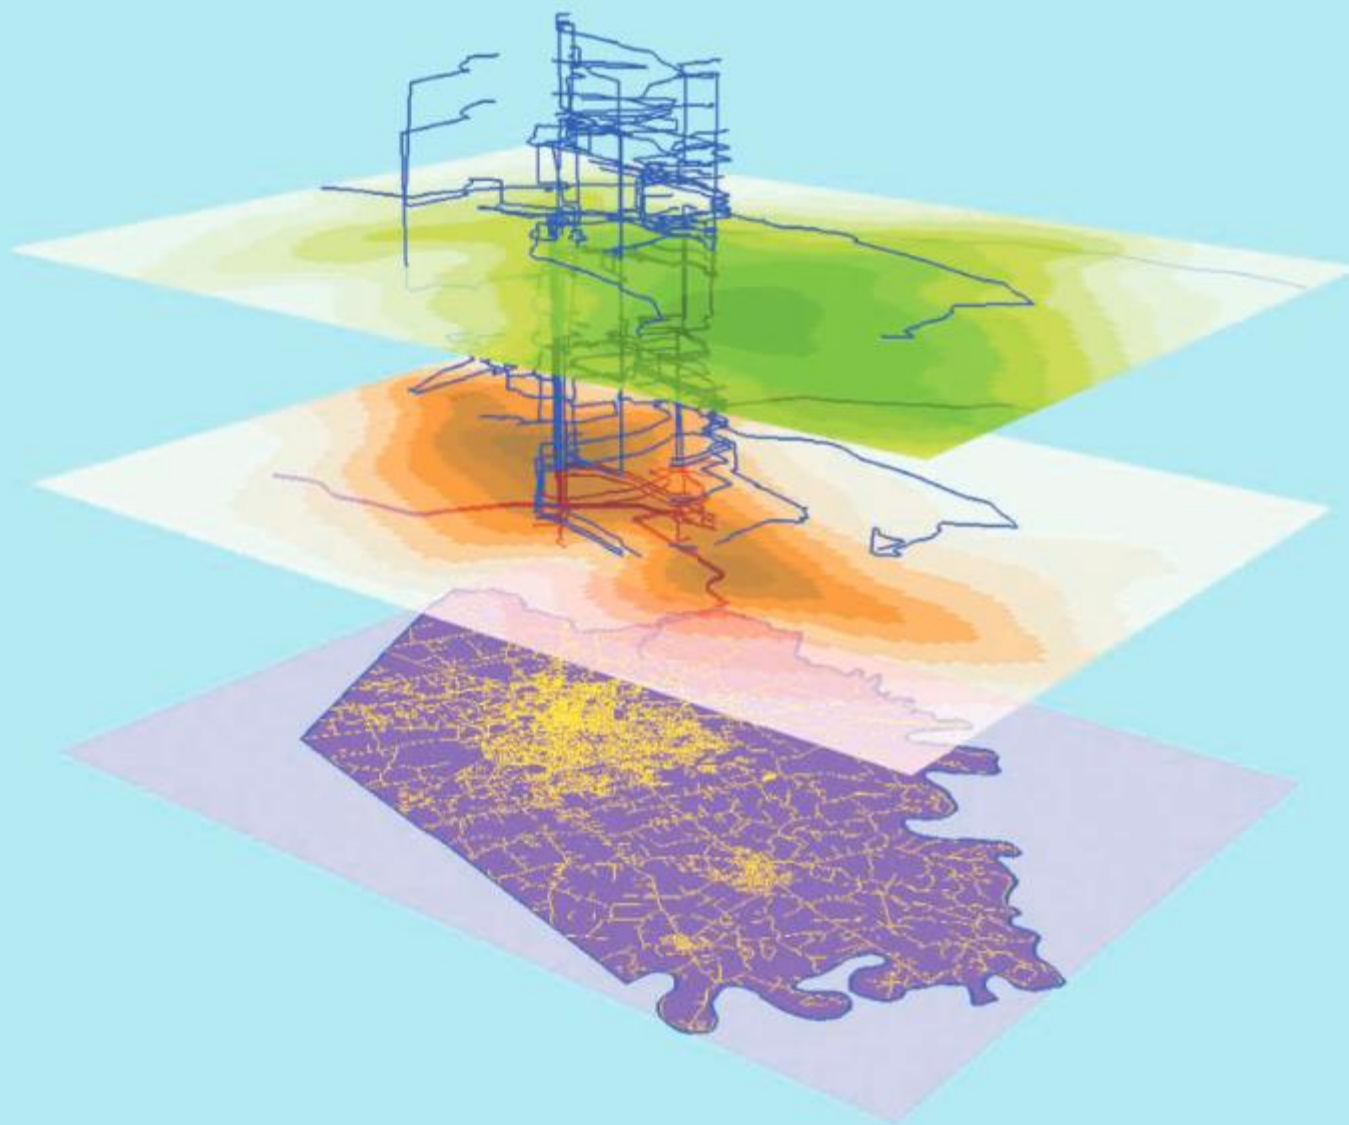

Raster (surfaces):

- use a fixed grid and record information about each element on the grid (satellite images, aerial photos, etc.)

RASTER

Risk factor concentration 2

Risk factor concentration 1

Spatial extent of study area

“Everyday” Geographical Objects

Points

households, health clinics, schools, retail outlets, crimes, bus stops, parks, neighborhood institutions and/or community assets, resources and risks...
OR... individuals (or other objects that can move)...

Lines

roads and transportation routes, rivers, pathways, social connections, infrastructure...

Areas (Polygons)

census units, ZIP codes, counties, states, provinces, school districts, police precincts, service areas, activity spaces, neighborhoods, watersheds...

Surfaces

weather, topography, land cover, pollution, urban-ness, risk...

“Everyday” Spatial Data Producers

Users have become producers, not just consumers, of spatial data

- Volunteered Geographic Information (VGI)
 - “Old”: Flickr, Foursquare, Google Maps, Historypin, etc.
 - “New”: mobile apps, wearable technologies
- Crowdsourcing (online posts, SMS, tweets...)
- Participatory GIS (PGIS)
 - “empowering the public and communities with GIS”

Classic GIS Applications

Businesses — site location for a new store

Urban planners — map traffic capacity and congestion

Demographers — population growth and decline

Police/firefighters — shortest route to incident

Epidemiologists — spread of disease

Biologists — invasive species or wildlife corridors

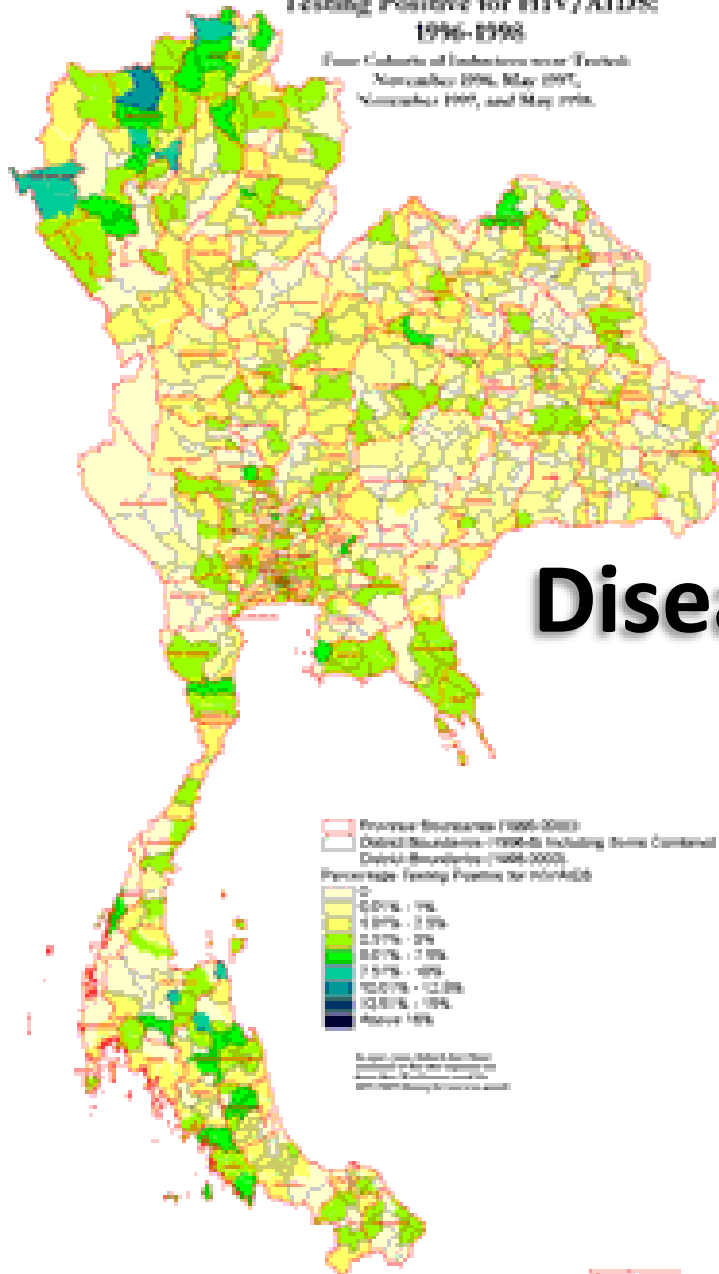

Public Health Applications

- Creating public health surveillance databases
- Mapping health data, e.g. spatial clustering of health events
- Risk and spread of infectious diseases
- Landscape ecology of vector-borne diseases
- Access to and location of health services
- Health disparities (geographic, socio-cultural, environmental)
- Ethnography of lived experiences of health care

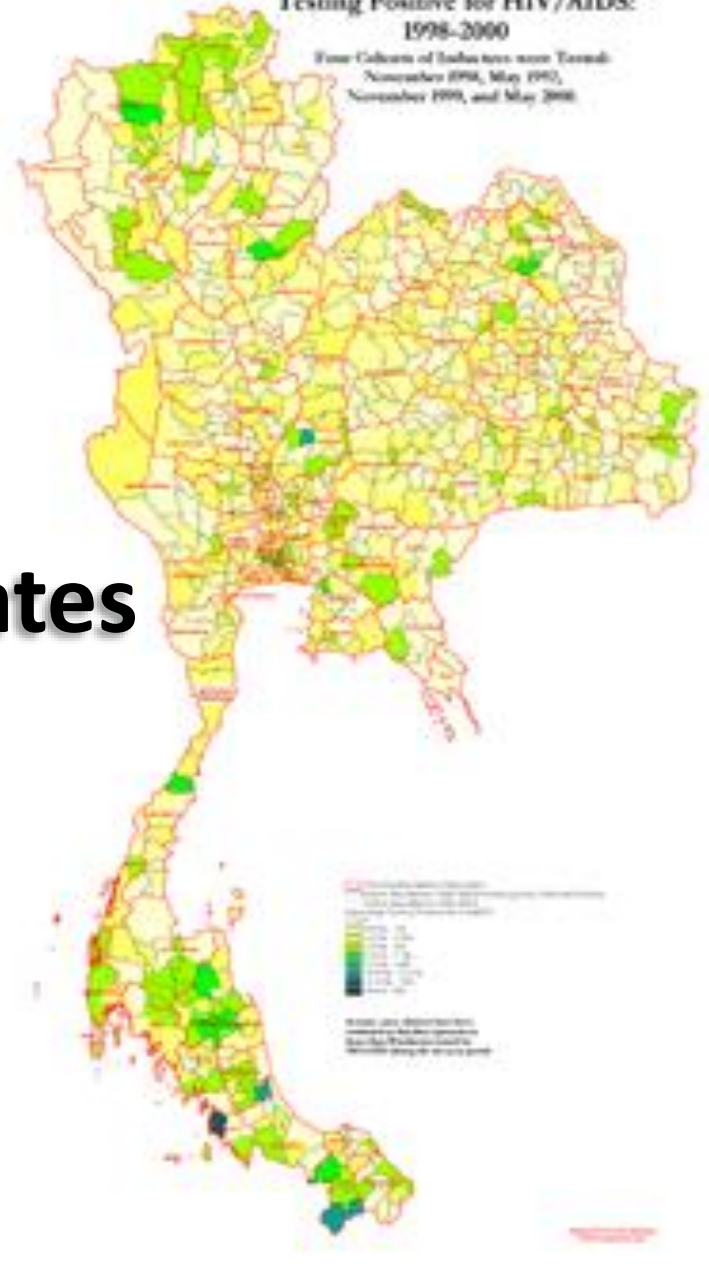

Percentage of Royal Thai Army Inductees
Testing Positive for HIV/AIDS:
1996-1998

Four Columns of Inductees were Tested:
November 1996, May 1997,
November 1997, and May 1998.

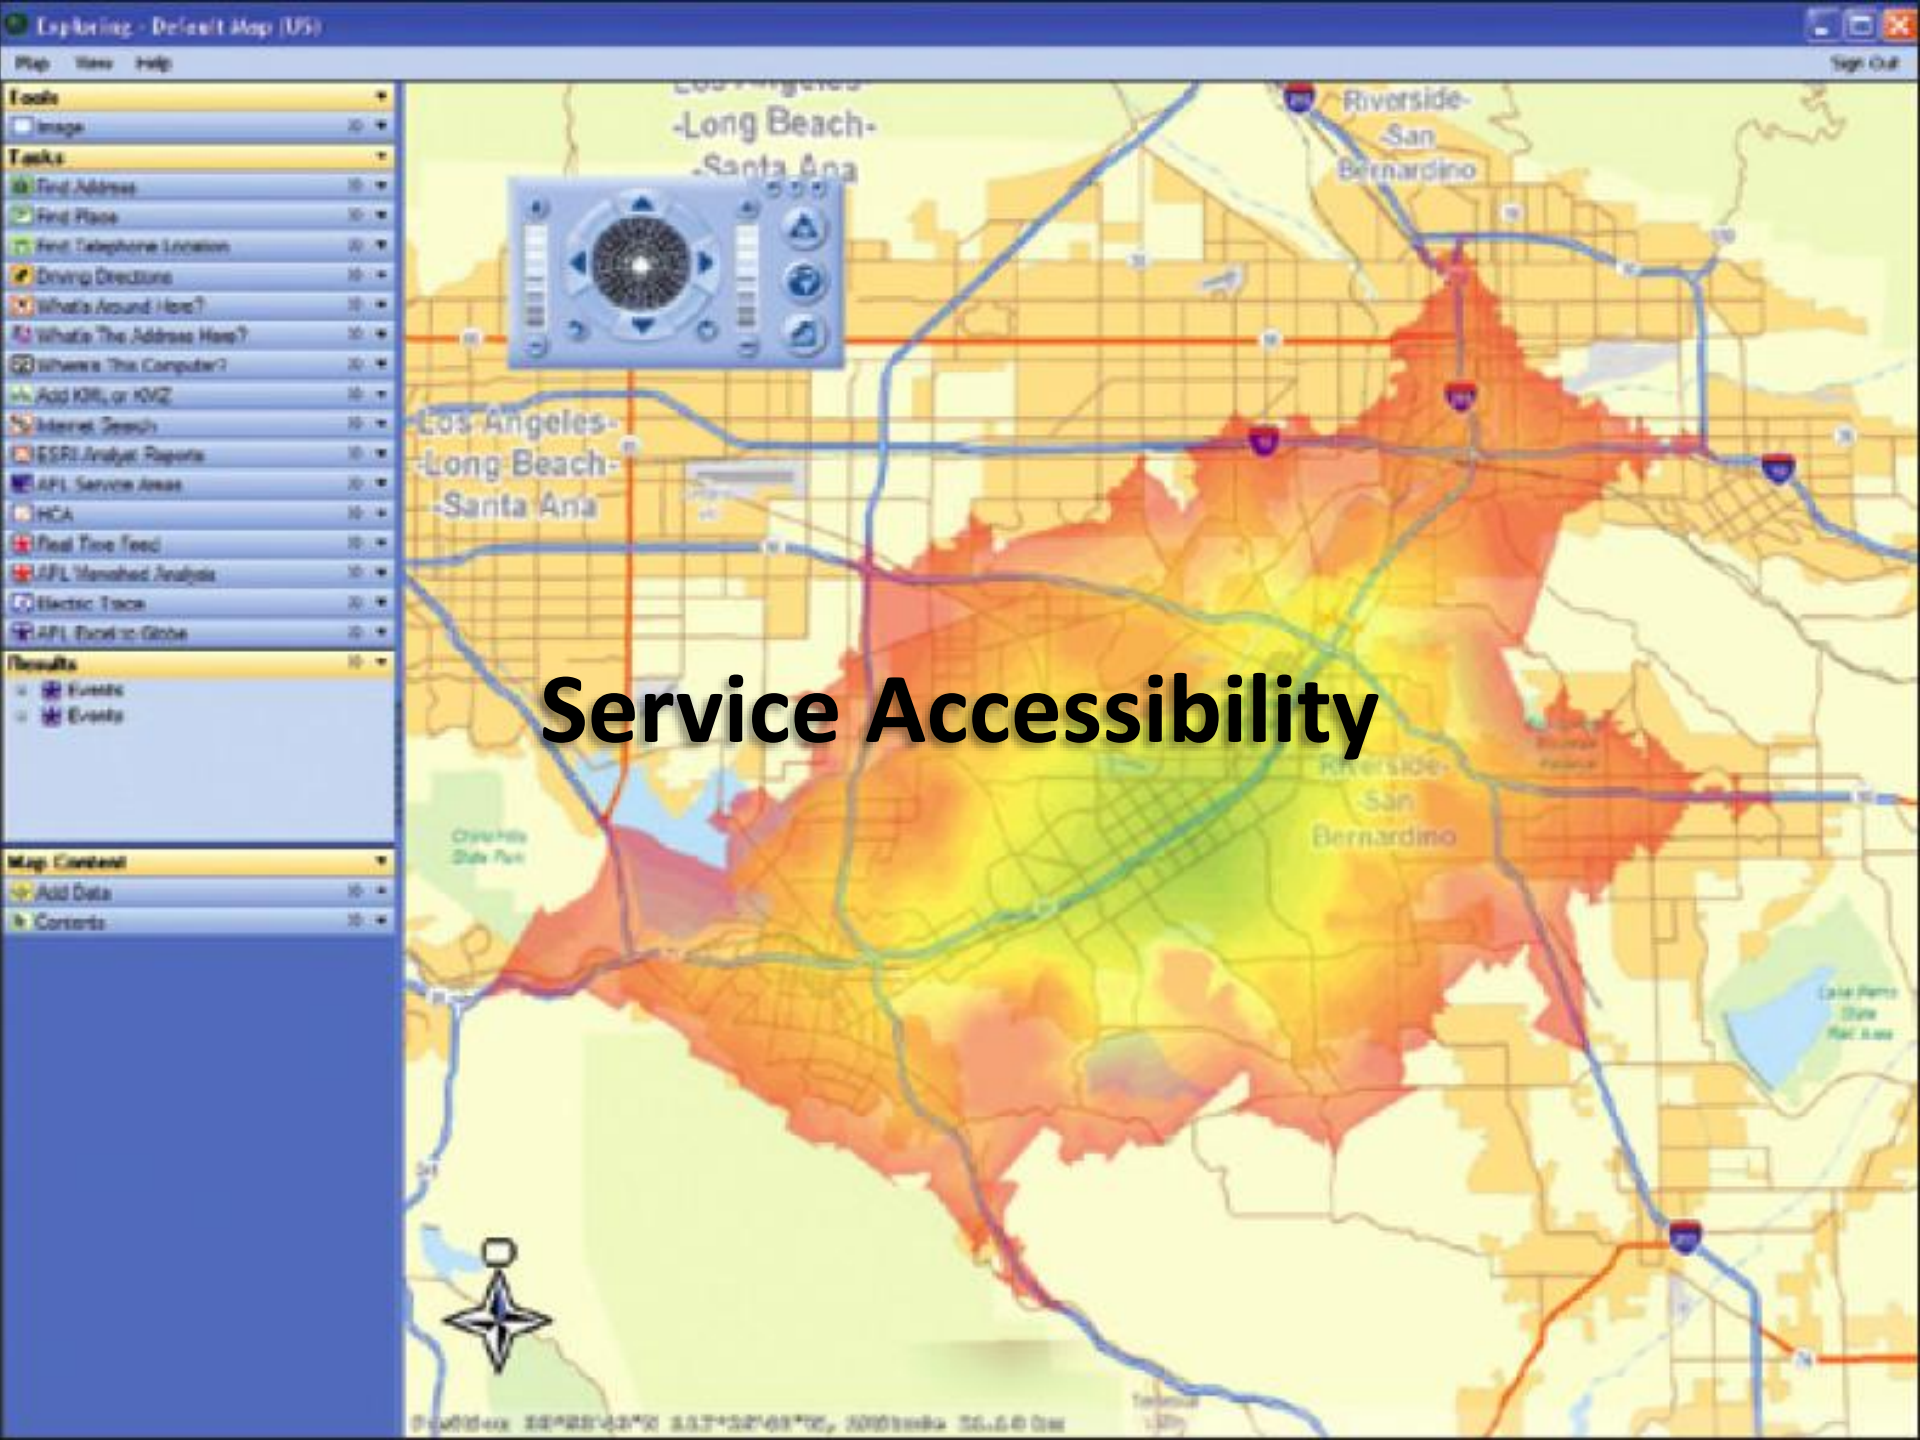

Percentage of Royal Thai Army Inductees
Testing Positive for HIV/AIDS:
1998-2000

Four Columns of Inductees were Tested:
November 1998, May 1999,
November 1999, and May 2000.

A Geo-Environmental Risk Map showing Areas Potential for LF Transmission in Tamil Nadu, Southern India

Beyond the Map... Spatial Statistics

Why spatial statistics?

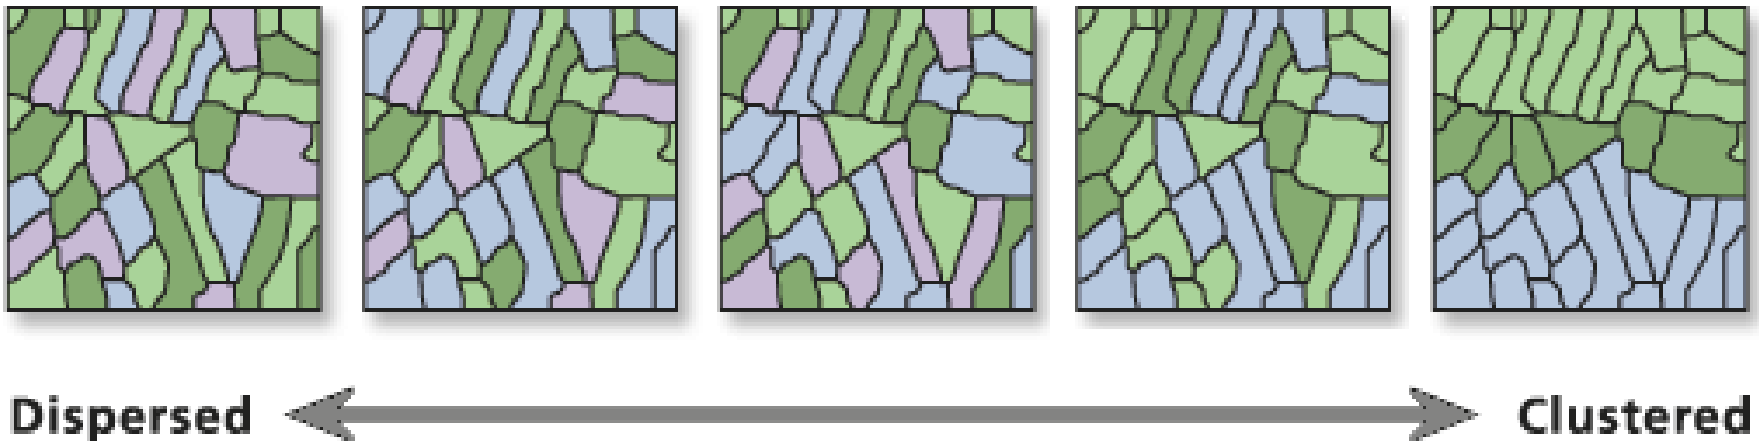

- Assumption of normality in the central limit theorem:
“independent and identically distributed”

$$Y = \beta_0 + \beta_1 X_1 + \beta_2 X_2 + \dots + \beta_n X_n + \varepsilon$$

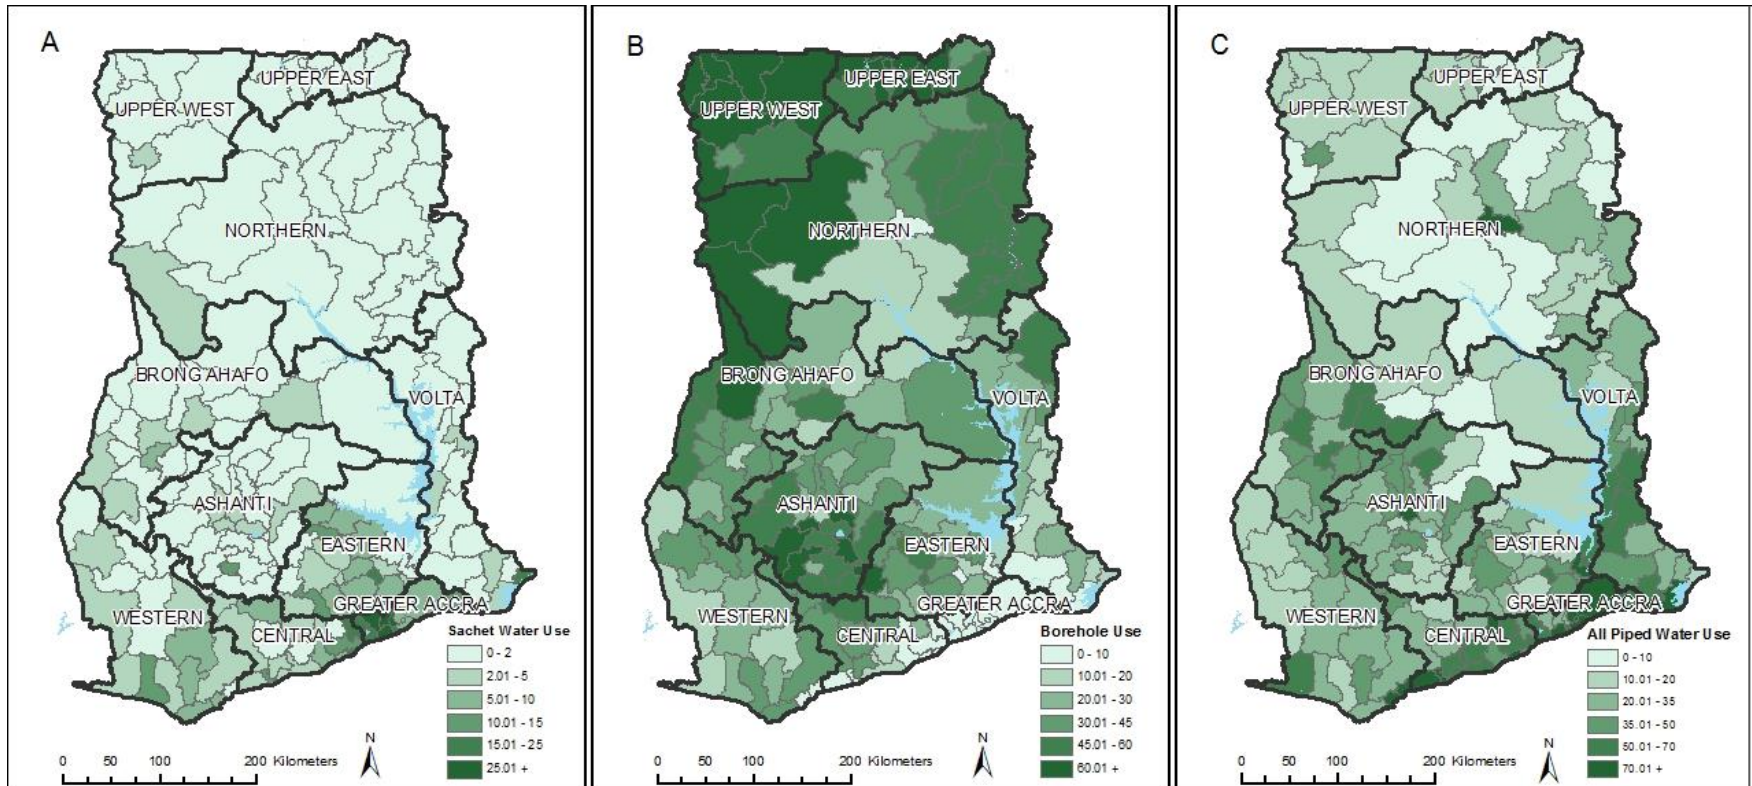

Spatial Autocorrelation

The extent to which similar values are near each other; a core principle of spatial analysis.

Primary drinking water sources

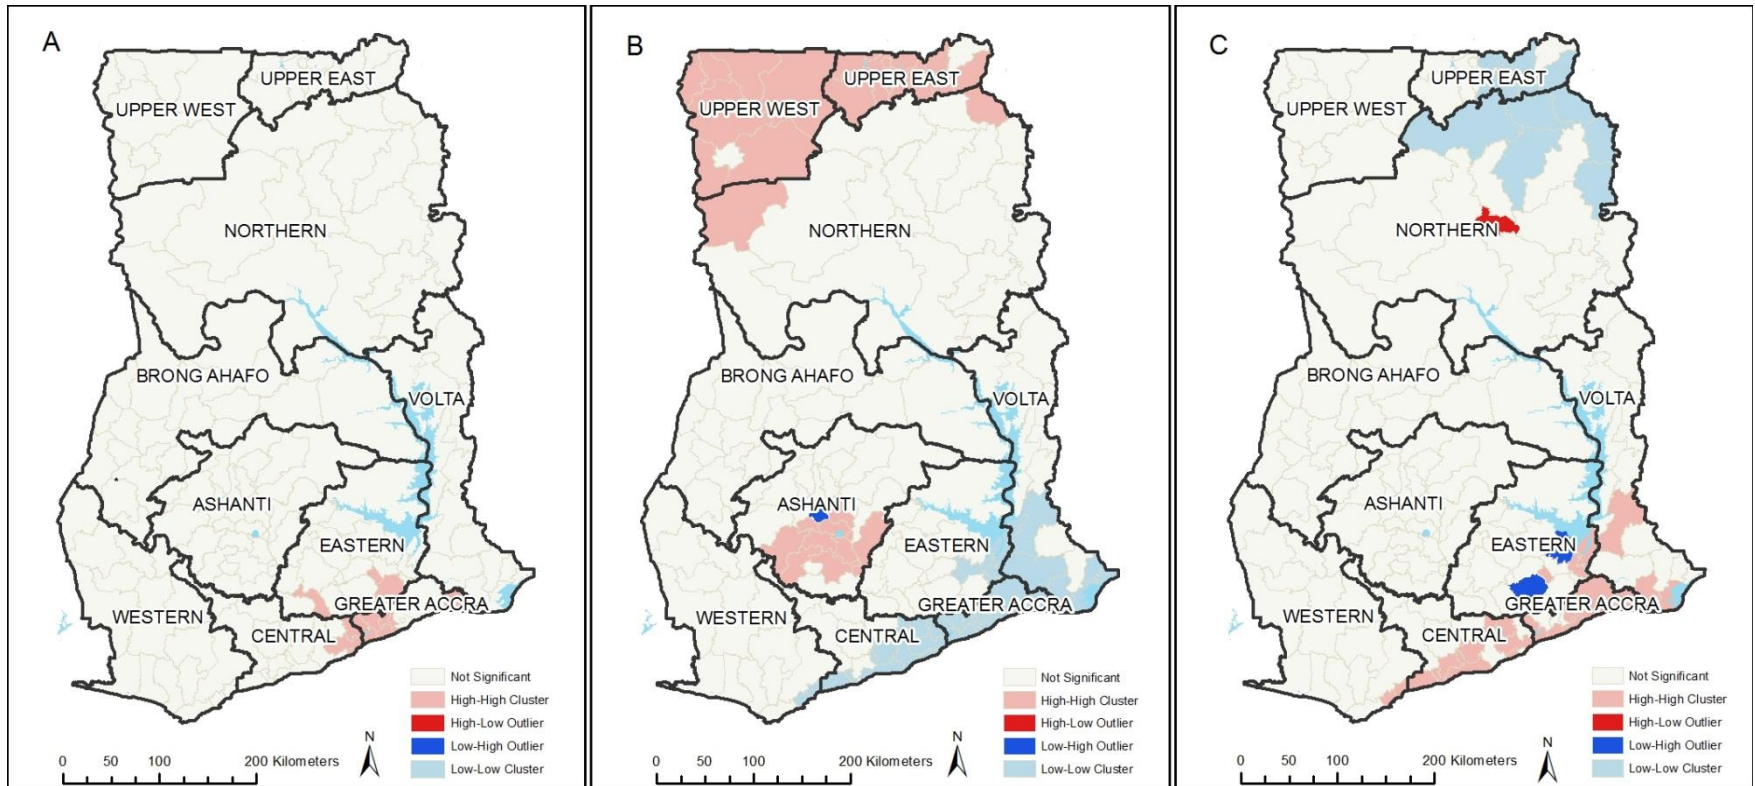

Sachet water

Boreholes

Piped water

Local cluster analysis (LISA)

Sachet water

Boreholes

Coefficient value:

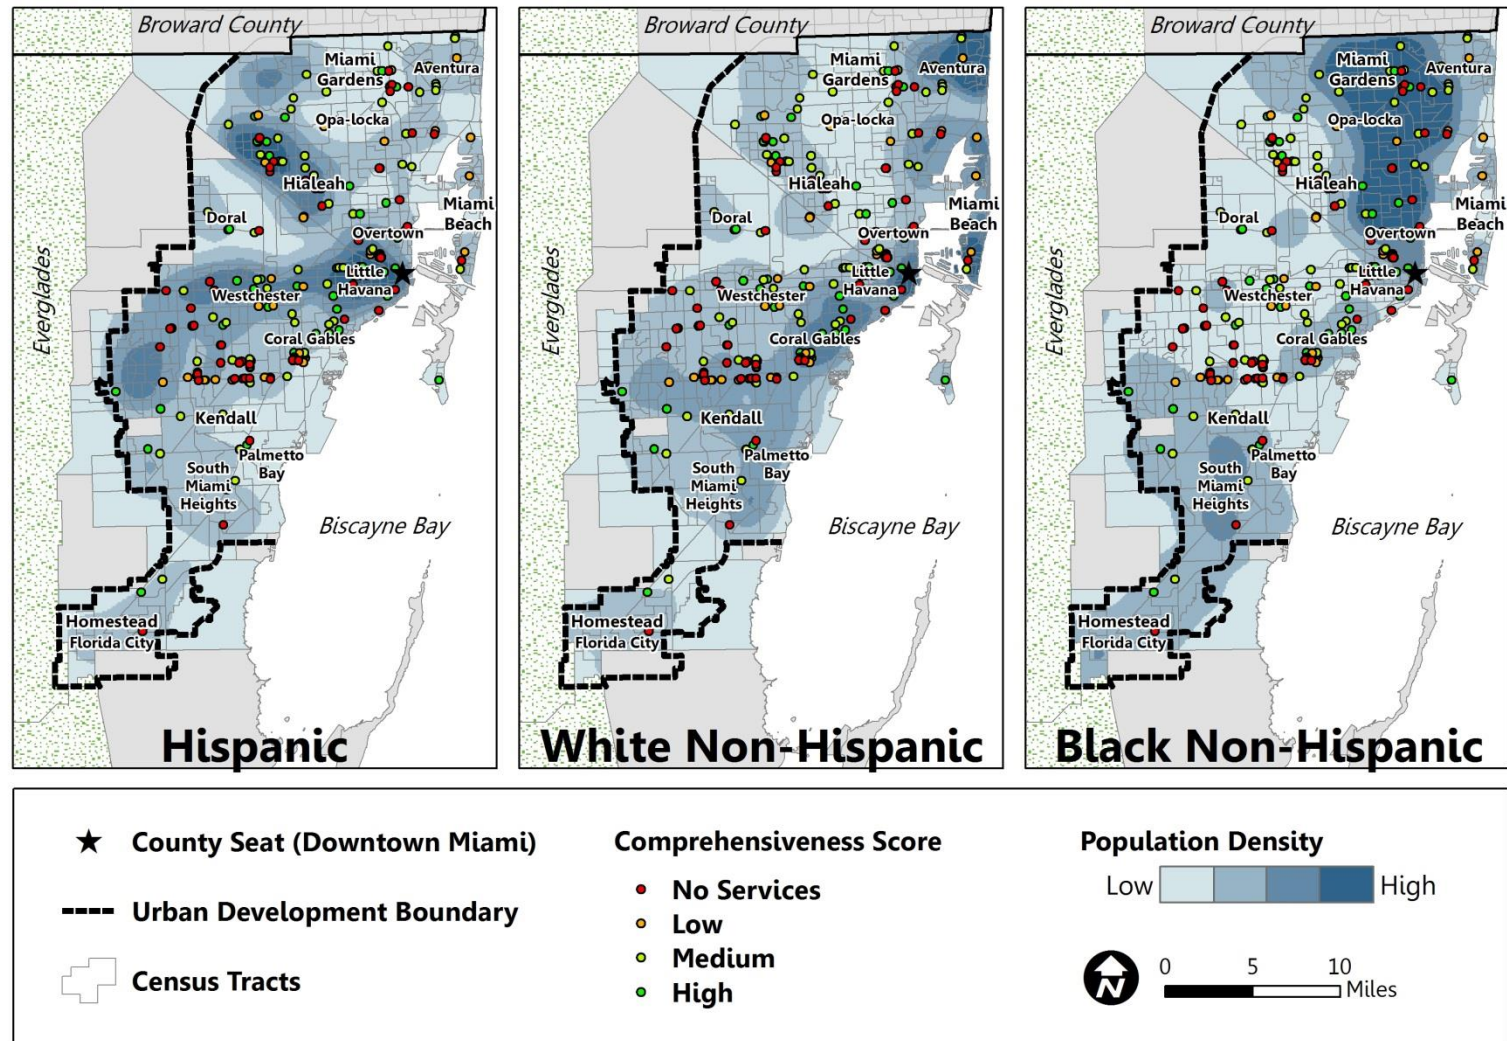

Low ⇔ High

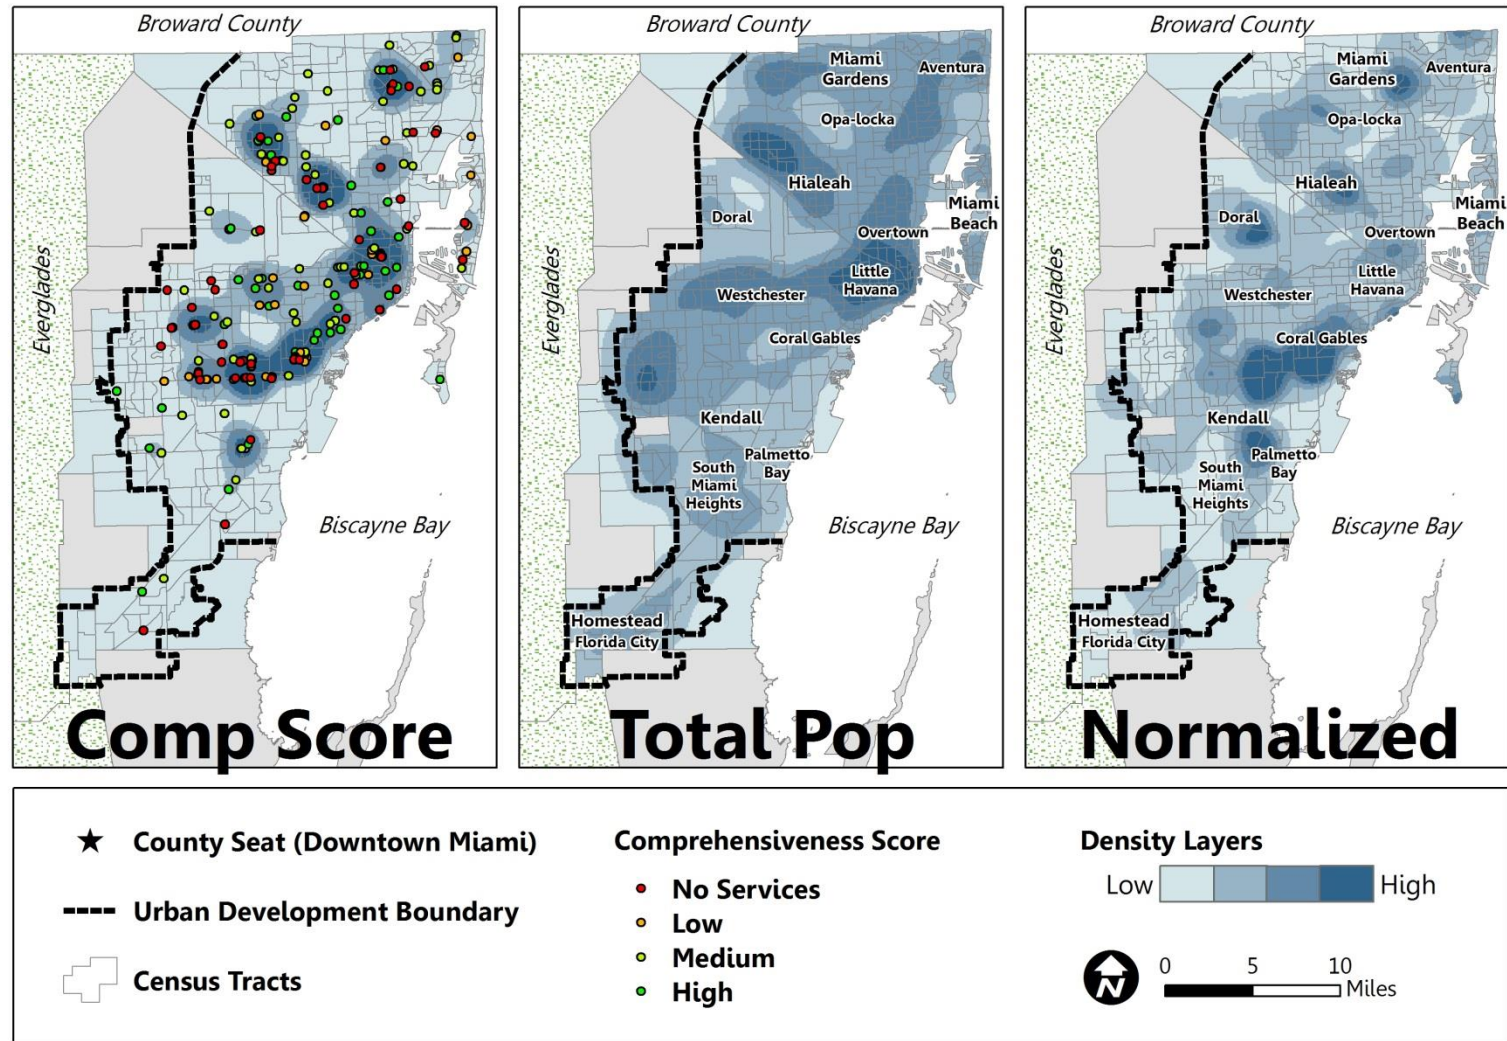

It's All About Health Disparities

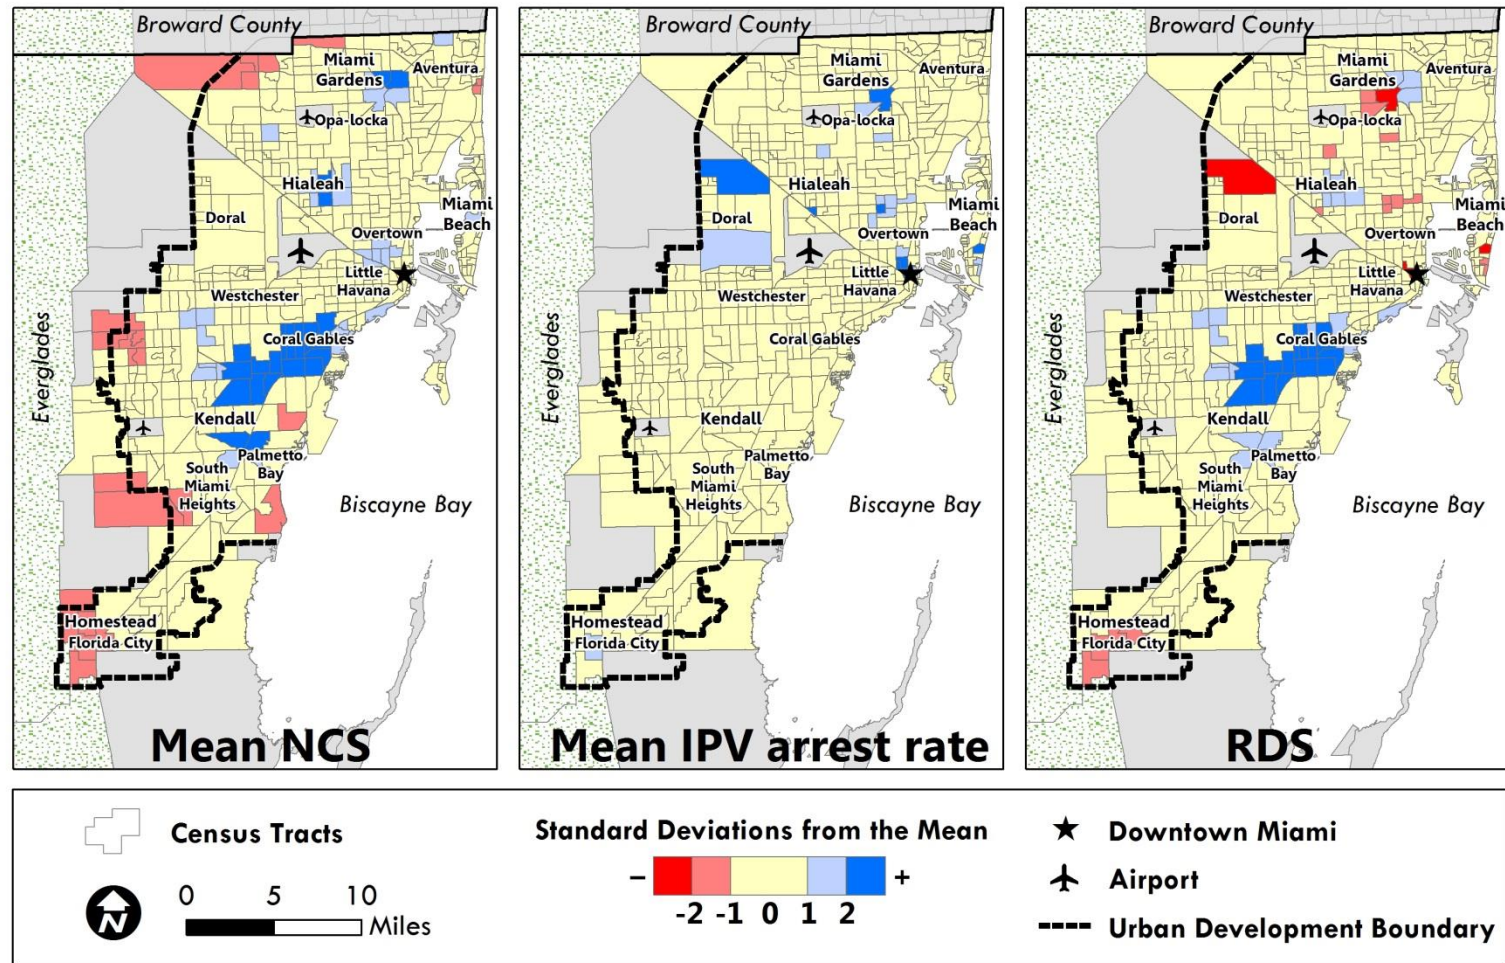

Example: IPV services & race in MDC

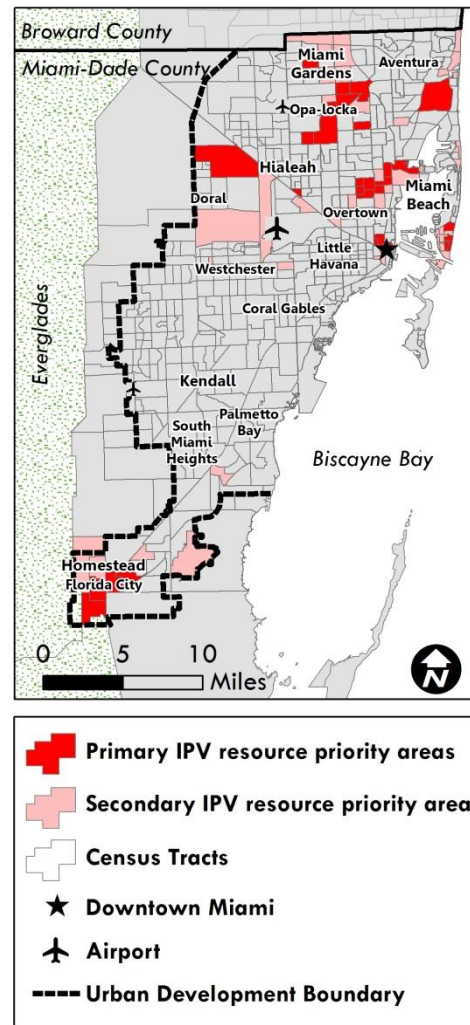

Example: IPV service disparities in MDC

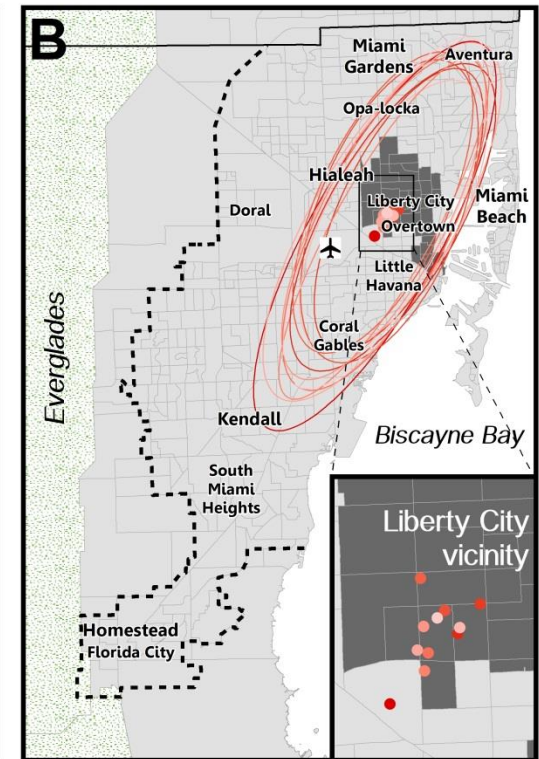

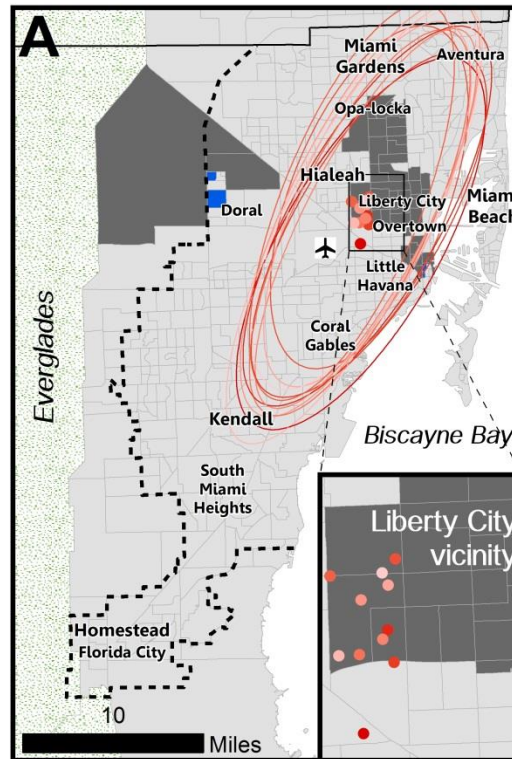

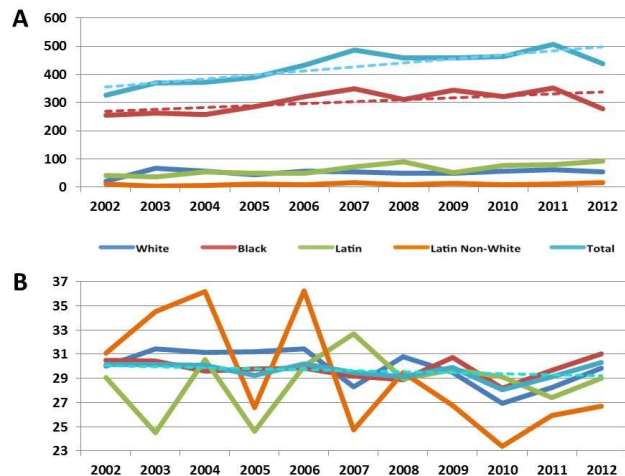

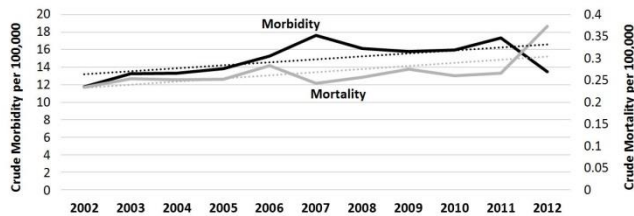

Example: IPV service disparities in MDC

Example: IPV service disparities in MDC

Example: GSW in Miami-Dade

- Urban development boundary
- ✈ Miami International Airport
- Cluster of high GSW rates
- Not part of a cluster
- Low GSW rate outlier

- GSW mean center 2002 → 2012
- GSW SD ellipse

So... Why Geospatial Analysis?

- Visualize your data
- Generate and test new hypotheses
- Exploit the unexploited in your data

Gain a fuller understanding of health phenomena

(Oh, and funding agencies love interdisciplinarity)

Audience Group Activity

Why Spatial Data?

The ability to analyze, over space and time:

locations

quantities

densities

changes

connections

what's inside

what's nearby

Open Source Spatial Tools

- ArcGIS Online and ESRI Virtual Campus
- Google Maps and Google Earth
- SimplyMap
- Quantum GIS
- GRASS
- OpenGeoDa
- SAGA
- ... and many other web map servers, spatial DBMS, and data transformation tools

Resources at UM

- ArcGIS software installed campus-wide
- [GIS Resources at UM Libraries](#)
 - Budget for data acquisition
- GIS Consultant in Richter Library's GIS lab
- Center for Computation Science (Ungar bldg)
- Development of a GIS data clearinghouse supported jointly by GEG and UM Libraries
- Health Geographics Lab: miami.edu/healthgeo

Freely Available Spatial Data

- [ESRI's ArcGIS Online Map and Image Services](#)
- [Geocommons](#)
- [SimplyMap](#) (via UM subscription)
- [National Atlas](#)
- [The GIS Data Depot](#)
- [DIVA-GIS](#)
- [Libre Map Project](#)
- [AfricaMap](#) (and other WorldMap projects)
- [United Nations Environment Programme](#)
- State and local government offices...

Innovative GIS Applications

- Crime events ([DC homicides](#))
- Economic growth ([Global MetroMonitor](#))
- International migration flows ([Peoplemovin](#))
- Sports analytics ([basketball shooting maps](#))
- Spoken Inuktitut place names ([Arctic Bay Atlas](#))
- The London Blitzkrieg ([Bomb Sight](#))
- Literary landscapes ([Scene Changes](#))
- Historical soundscape of NYC ([Roaring Twenties](#))
- Urban emotion maps ([Christian Nold](#))
- Location-based gaming ([Zombie Apolcalypse](#))
- Virtual tour of Coral Gables ([Coral Gables Virtual History](#))
- Spatially reference historical maps, and more ([HyperCities](#))
